

COLLECTION DEVELOPMENT CRITERIA

Subject area: Computer Information Systems (CIS)
Academic year: 2009-20010
Bibliographer: Dr. David Mizener
Liaison: Dr. Joseph Roge

General Criteria

1. Selected titles appropriate to upper-division and graduate course work.
2. Emphasize acquisition of titles, which are likely to be of enduring, rather than ephemeral value.
3. Give preference to titles, which contain bibliographies and have been published within the last six months.

Specific Criteria

1. The following subject areas will receive priority attention for upper-level division course work:
 - a. database management
 - b. systems analysis
 - c. telecommunications
 - d. information resource management
 - e. management information systems
 - f. object oriented design and object oriented programming
 - g. business intelligence
2. The following subject areas should receive priority attention for graduate level course work:
 - a. local area networks (LAN)
 - b. file structure
 - c. international information systems
 - d. telecommunications
 - e. decision support systems
 - f. database management
 - g. expert systems, including artificial intelligence
 - h. computer applications to quantitative methods
 - i. distributed data processing
 - j. business intelligence
3. Materials necessary for faculty research.
